Medium School
10+2
CGPA 7.45

SUMMARY

Aspiring Software Developer excited at the prospect of developing agile software and developing software applications in a professional setting. Results-oriented worker recognized by peers for my effective planning and problem-solving skills. Looking to apply my understanding of Databases: Sql and MongoDB,Backend:Node with Express.js,Front End :React.js ,redux at your company.

EXPERIENCE

Brototype

*MERN Stack Intern,
July 2022-current*

- Was a great opportunity to grow my knowledge and experience in MERN stack through self learning.
- Got exposure to valuable projects and helped in growth of the company.

PROJECTS

PHONIX

An E-Commerce application based on Gadgets.

- Created Backend using Node.js and Express.js
- Stored the data in MongoDB database using Mongoose
- Added authorisation using Sessions.
- Images of application was securely stored in Cloudinary-a digital cloud platform.
- Securely stored the passwords by encrypting them.
- Properly followed MVC architecture.
- Divided the project into multiple modules.
- User can Signup to the application with an added OTP verification.
- Users can login to the application,profile access,view products ,add them to wishlist or cart and also could place order.
- Users can apply valid coupons to avail discounts and also pay the amount online through razorpay.

SKILLS

Technical Skills

Backend

Node.js

Express.js

Database

MySQL

PostgreSQL

MongoDB

Frontend

HTML

CSS

Bootstrap

React.js

Tailwind css

Others

Redux

AWS

Nginx

Git & Github

Linux and unix

Kali linux

Firebase

JWT

Google Appsheet

Languages Known

English

Malayalam(Native)

Hindi

Soft Skills

Time management

Planning

Result-oriented

Work ethic

Motivation

- Admin controls overall application and has a dashboard with sales report and charts regarding important aspects of orders.
- Admin can limit or block any users access to the application.
- Admin is responsible for managing products,brands,categories,banners and coupons for the application.

CURRENT PROJECT

- Currently I am working on a MERN Stack project for Real Estate Management.
- Frontend is designed using React .
- Redux is implementing for global state management
- Node.js is used as backend
- MongoDB to store the application data
- Mongoose as the interface for connection
- JWT used for token Management
- Users could signup to the application with added otp verification.
- Users can log into the application with valid credentials and issued with a jwt access and refresh tokens.

OTHER PROJECTS

- Created a simple user management system with sessions to implement CRUD Operations using Node.js and Express.js
- Created an TO-DO List application by using the concepts of React.js
- Made some clones of existing applications using HTML ,CSS And Bootstrap.
- Created a user Authentication and Authorization System using Node.js and React.
- Successfully cloned the Netflix UI with React along with TMDB database.
- Created a clone of OLX application using the knowledge and experience in React and Firebase.

RECIPE FROM VEGETABLES

An AI based project in python.

- Created Backend using Python.
- Used the flask framework.
- Trained the application with neural networks using tensor flow.
- Divided the project into 4 modules-Admin,User,Store and Delivery Boy.

DECLARATION

I hereby declare that all the facts given above are true and correct to the best of my knowledge.
